

FEEDING DIRECTIONS

2000 ppm

BOVINES | Beef & Dairy Cattle

1.5 g/head/day

POULTRY | Broilers & Layers

100 g/ton

SWINE | Piglets & Sows

100 g/ton

COMPANIONS | Dogs & Cats

25 g/ton

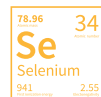

Or, follow the instructions from your nutritional consultant.

CYPRESS

animal grade yeast

Excell High Selenium Yeast 2000

EXHSY2000

COMPOSITION

Non-GMO yeast strain (*Saccharomyces cerevisiae*)

100% NATURAL

Food-form, organically bound selenium matrix
100% organically bound. No free selenium

BENEFITS

Selenium yeast has antioxidant properties that improve:

- Immunity
- Anti heat stress
- Reproductive performance
- Meat quality
- Metabolism
- Longevity

The incorporation of selenium into the body's proteins via amino acids, selenocysteine, or Glutathione peroxidase (GPx) enzyme inhibits and destroys naturally occurring peroxides that cause cell damage, which is why we use a food-form complex of selenium – primarily selenomethionine. This protects cell membranes, including cell walls, which is significant for muscle development.

The blood selenium content with supplementation of selenium yeast is 20% higher than sodium selenate ($P < 0.05$). This indicates that dairy cows consuming high selenium yeast had a higher utilization rate than sodium selenate as an organic selenium source. In addition, selenium yeast is not easily affected by rumen microorganisms which allows for better digestion and absorption of selenomethionine. Its bioavailability is significantly higher than that of sodium selenite.

HIGH QUALITY STANDARDS

Produced at the same high quality standards as our human grade ingredients.
